FRAMECRAFT

Editable stories from long-form video

A working local AI-assisted video-clipping application

Real application capture / original demo graphics / approved public speech source

For independent podcasters, educators and creators

Import authorized recordings, inspect ranked source moments, correct captions and framing, then export a real MP4 or ZIP. Local Whisper recognition, resumable processing and persistent edits support the working workflow.

Verified engineering

290 tests + 4 subtests rerun 29 Oct. Continuous 60-minute processing and 1080p export recorded in the 23 Oct release.

Next opportunity

Creator trials and product mentorship. Customer demand, pricing and commercial traction remain unvalidated.
