# FRAMECRAFT

## Long-form conversations. Editable short-form stories.

AI-powered video clipping with inspectable choices and a working local editing pipeline.

**WORKING LOCAL PRODUCT / OCTOBER 2026**

Original workflow illustration

# Editing starts before the first cut

The hardest moment to find is often the one that still makes sense on its own.

| Review footage | **Find the moment** | Trim the story | Reframe video | Correct captions | Refine the edit | Export and check |
|---|---|---|---|---|---|---|

A compelling sentence can lose its value when the question, explanation or payoff falls outside the cut.

# A focused first customer

INITIAL CUSTOMER HYPOTHESIS

## Independent podcasters and educators

People with recurring conversations, lessons or webinars and a need to review each published claim.

VALUE TO TEST

## More usable clips from existing recordings

Fewer manual repairs
Clear source context
Control before publishing

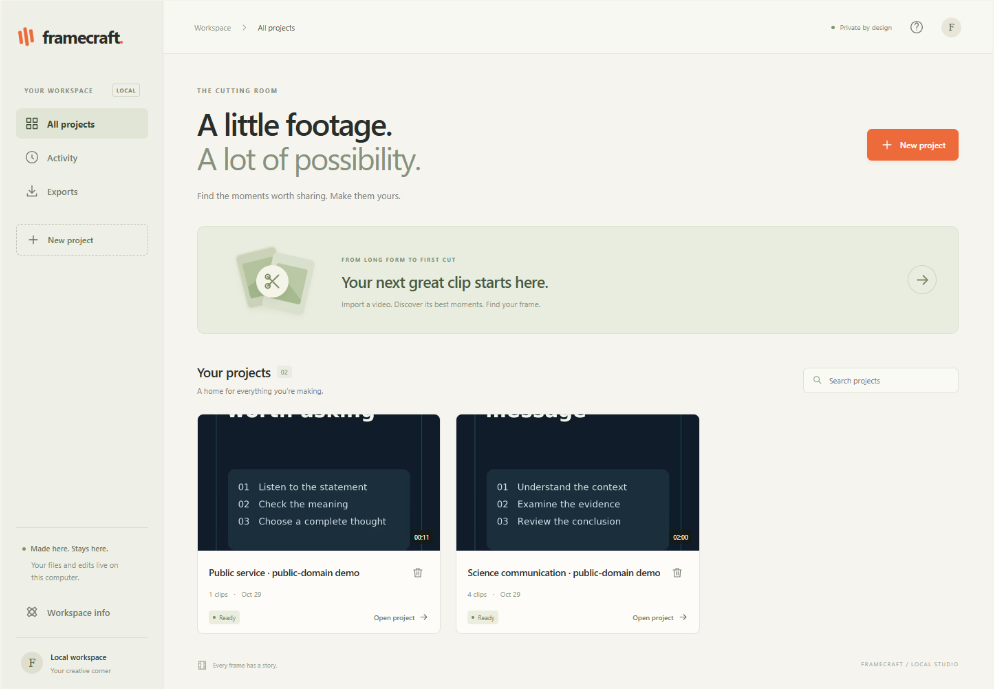

# A working path from import to export

Framecraft finds candidate moments, explains its ranking and keeps the edit in the creator’s hands.

01

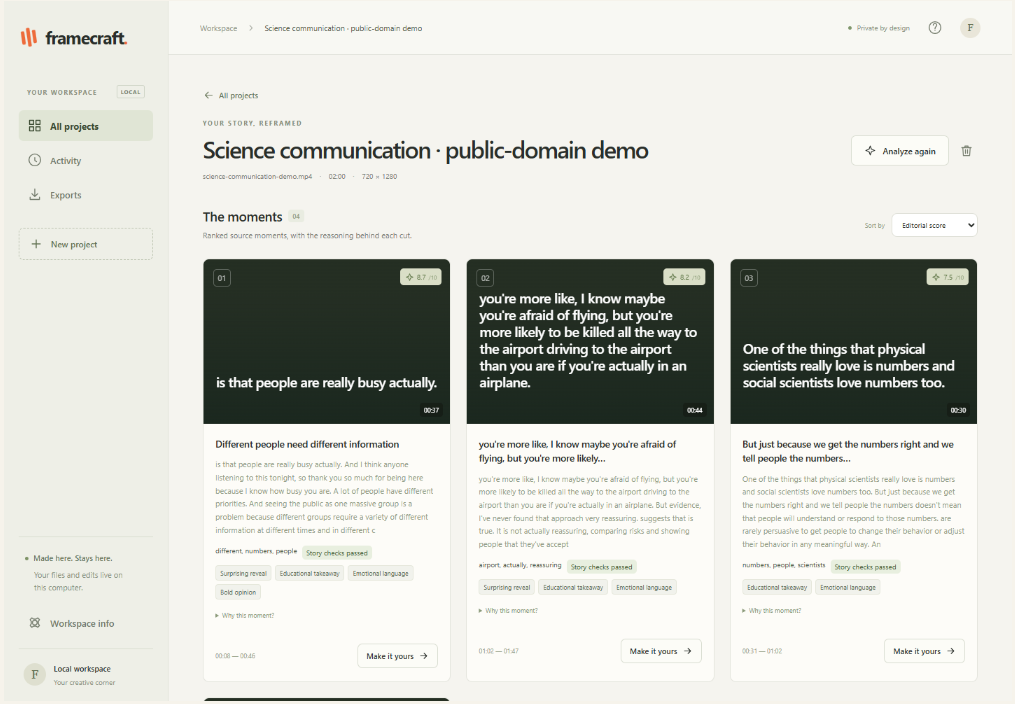

## Import and analyze

Authorized files or supported connections feed a durable local pipeline.

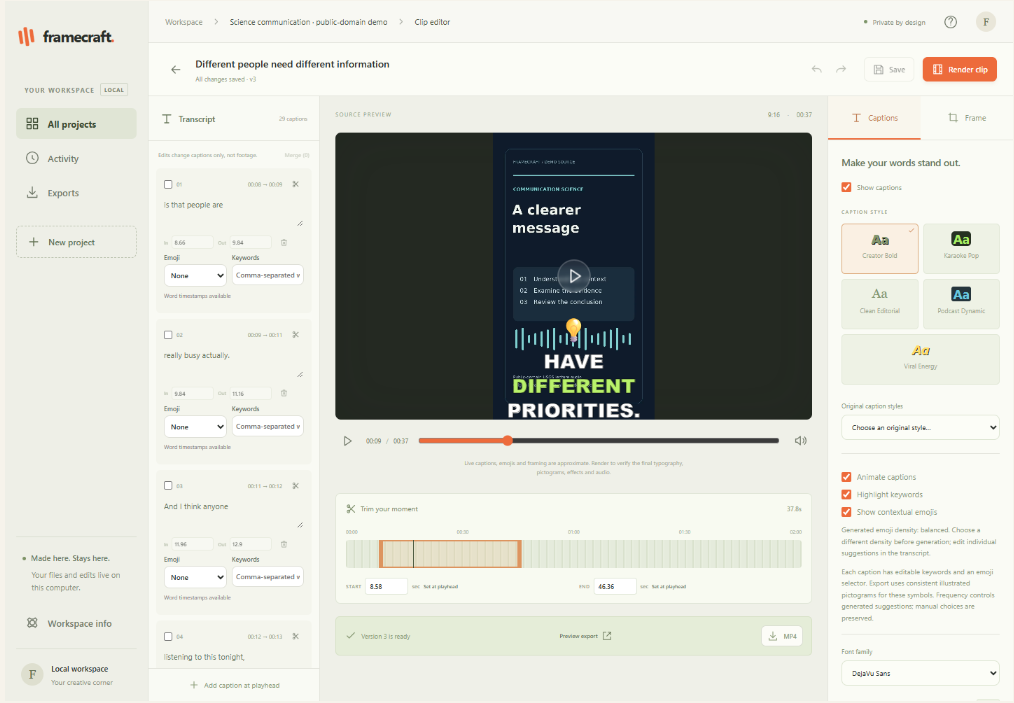

**Import / Analyze / Rank / Edit / Export**

# The creator can inspect and refine every cut

## See the evidence

Source timestamps and heuristic score evidence.

## Edit the actual result

Saved captions, framing and rendered preview.

# Local media processing, durable project state

01
**Authorized intake**
File, HTTPS, source registry

02
**Bounded worker**
Process gate and checkpoints

03
**Speech recognition**
Whisper word estimates

04
**Highlight selection**
Context and ranked evidence

05
**Visual edit**
Captions and scene framing

06
**Render and verify**
FFmpeg, libass, ffprobe

**React and TypeScript**
Creator controls

**FastAPI and durable queues**
Separate import and analysis stages

**SQLite WAL and local files**
Sources, edits and export history

# Control over each cut

LOCAL PROCESSING

## No mandatory paid AI key

Speech recognition and media analysis run on the user’s machine.

EXPLAINABLE CHOICES

## Evidence beside the score

Creators can inspect hooks, context, payoff and source timestamps.

REVERSIBLE EDITING

## Saved work stays available

Versioned edits and previous selections survive reanalysis.

**Direction to validate: a review-first workflow for creators who value source control.**

# Different approaches to the same editing job

| Product | Documented focus | Delivery / evidence |
|---|---|---|
| Vizard | Full-context clips and captions | Hosted product / advertised |
| OpusClip | Multimodal prompt discovery | Hosted product / advertised |
| Submagic | Captions, effects and editing | Hosted product / advertised |
| Framecraft | Heuristic ranking and editable captions | Local Windows app / verified prototype |

Framecraft gaps: reliable active-speaker attribution, forced alignment and broad multimodal reasoning.

Sources: official product documentation, accessed 29 Oct 2026. Vendor claims are not independent tests.

# Product development and technical validation

**290**

automated tests + 4 subtests

**60 min**

continuous speech processed

**1080p**

real H.264 / AAC exports

| Source duration | Analysis runtime | Words | Peak private memory |
|---|---|---|---|
| 13 min 29 s | 101.20 s | 2,750 | 1,341 MiB |
| 15 min | 104.08 s | 2,131 | 1,309 MiB |
| 60 min | 311.62 s | 9,224 | 1,397 MiB |

Tests rerun 29 Oct. Long-video evidence: 23 Oct 2026, one CPU workstation. Engineering validation only.

# A focused validation and business model

PROPOSED FIRST EXPERIMENT

## 5–10 creator trials

Use authorized recordings. Review the first batch together. Measure clips kept, editing effort and export reliability.

**Test willingness to pay before choosing a price.**

BUSINESS HYPOTHESES

**Creator subscription**

**Usage tier for higher volume**

**Professional editing controls**

Demand, pricing and unit economics remain unvalidated.

# The next milestones have clear evidence gates

QUALITY EVIDENCE

## Better selection and timing

Label reference moments. Measure recognition errors and word onsets. Review failure cases.

CREATOR TRIALS

## A workflow people keep using

Observe editing effort, clip acceptance, usability and willingness to pay.

DEPLOYMENT READINESS

## A responsible hosted pilot

Establish account security, operational controls and per-minute processing cost first.

# A useful product, built through measured iteration

## KevBrad
